YOUR HOME CLEANLINESS BUILT-IN

Central Vacuum Cleaning Systems

CLEAN WITH ELEGANCE

Spaces where you feel truly comfortable are calm, inviting, and pleasantly clean.

With a Disan system, both appliances and dirt disappear from view: while you move the brush across the floor with an easy motion, pipes inside the walls transport dust and dirt to the powerful central vacuum unit. From there, exhaust air is blown outside the building.

This means that no particles return to the rooms, you breathe noticeably cleaner air, and all surfaces gather dust more slowly. And while cleaning, the only thing you hear is air passing through the vacuum brush.

THE CENTRAL UNITS SERIES 8400

MADE IN ITALY

Suction power

Thanks to powerful turbines, vacuuming will literally become a breeze. One single sweep is enough to clean a surface.

Durable

The robust design and high-quality components of Disan central units guarantee reliable performance for decades.

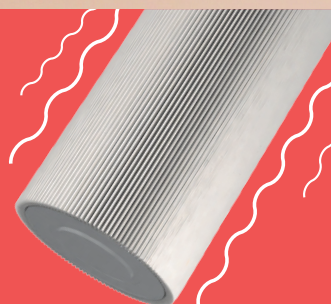

Large capacity

The container collects large amounts of dust and needs to be emptied only a few times a year.

No Maintenance

With FilterGuard v7 technology the filter cleans itself automatically after each use, maintaining consistent performance without the need for maintenance.

THE SYSTEM

Luxurious Comfort

Easy cleaning with only light accessories to carry.

Clean Breathing

Improved air quality reduces respiratory allergy symptoms by up to 60%.

Sleek Design

Elegant inlets seamlessly integrate with the architecture.

Silent Elegance

During operation, only a soft flow of air through the hose can be heard.

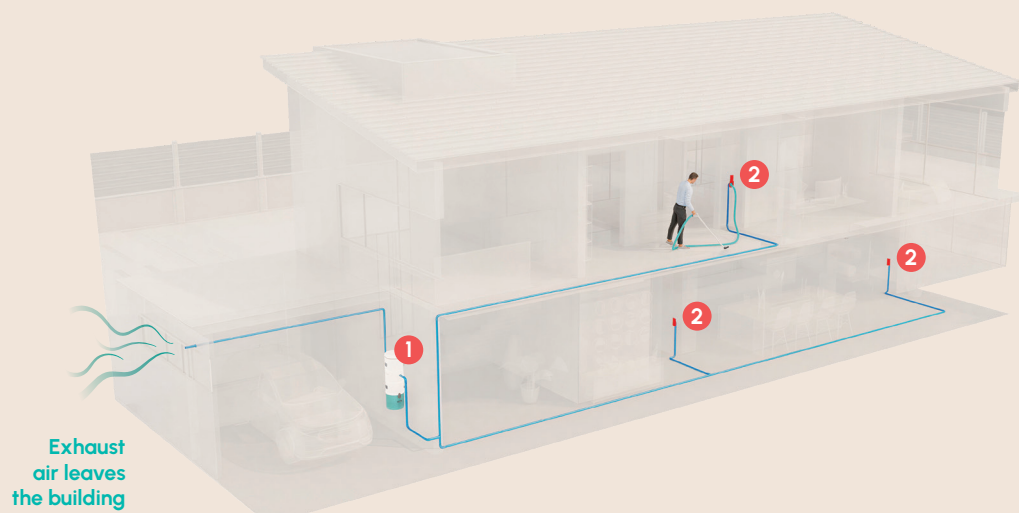

Universal Solution

Accessories for every need, even vacuuming liquids.

Certified Sustainability

Disan systems reduce CO₂ emissions and are CasaClima-approved.

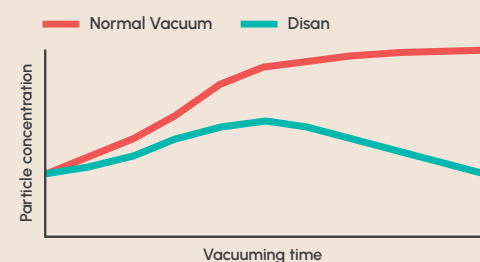

1 Central unit

2 Inlet

AIR QUALITY

Disan central vacuum systems expel dust, allergens, and exhaust air directly outside the building, preventing any recirculation in domestic spaces. This keeps the indoor air exceptionally clean and healthy.

The concentration of airborne particles is significantly reduced and furniture surfaces stay clean longer, helping to create a healthier environment for the whole family. Symptoms related to respiratory allergies can be reduced by up to 60%.

THE HOSE AND INLET

The **DISAN InTheWall** system perfectly combines functionality and elegant design. Long hoses no longer need to be carried by hand; simply pull the hose out of the wall. And then it disappears just as easily.

→ Retractable hose housed inside the wall → Variable hose length: 9, 12, or 15 meters → One handed use possible

InTheWall
Retractable hose system

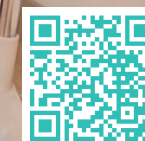

1) Unlock the hose and cover the open end.

2) The hose automatically disappears inside the wall.

3) Close the inlet cover.
